                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ö Lote C.J., Weiss J.B.,

Identification in unity of a low rolecular weight highly polar

91youopeptide containing cynteinyl galactose.";

Blocken. C. 123.249-259 (1971).

1. FUNCTION: THE 1DENTITY OF THE SIYOPROPER FROM WHICH THIS PEPTIDE

1. SDERIVED IS UNKNOWN. NO PHYSIOLOGICAL FUNCTION HAS BEEN

ATTRIBUTED. AN ERYTHROCYTE MEMPRANE GLYCOPEPTIDE HAVING A

SIMILAR STRUCTURE HAS ALSO BEEN FOUND.

No. is the number of results predicted by counce to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                            5, 2003, 17:10:22 ; Search time 3: Seconds (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STRAINECV MUSTANG.

The prisent invention describes an influence of the publish a peptide of its and a carrier (1b) derived from protein D of hermophiles influence of its fragment. Also described any of a vaccine of its and an excipient of 2 preparation of 1, and an excipient of 2 preparation of 1, and an excipient of 2 preparation of a vaccine of 1), and the vaccine of 1), and the vaccine are useful to the ranifold of a vaccine of 1), and the vaccine are useful to the ranifold of a vaccine of 1), and the vaccine are useful to the ranifold of a decrease of 1) and the vaccine are useful to the ranifold of a decrease of 1) and the vaccine are useful to the ranifold of a decrease of 1). The properties of 1) and the vaccine are useful to the ranifold of a decrease of 1) and the properties of 1) and 
                                               Infunctions and vaccine comprising the infunction useful for preventing and treating infectious diseases e.g. malaria and chronic disease e.g. cancer, comprises peptide and carrier from protein ( of influenzae

The present invention describes a peptide (i) comprising an isolated surface exposed group/epitope (EL) of C-epsilon-2 domain (3) of immunoglobulin E 1921, or its immittee. Associated area (1) an immunoglobulin E 1921, or its immittee. Associated area (1) an immunoglobulin E 1921, or its immittee as a vaccine (11) (2) a vaccine (11) (3) a ligand (1V) comprising (1V) comprising (1V) and peptide (3) a phartaceutinal composition (PC) comprising (1V) (6) an immunoglobulin comprising (1A) and (7) producing (111) by producing (111) (1) can have antial explained release inhibitor. (1), (11) and can be used as a vaccine and histamine release inhibitor. (1), (11) and (111) are useful in medicine and also in the manufacture of medicaments for treating and also in manufacture of medicaments for treating and else in diagnostics and in the affinity purification (2) of circularing and also in diagnostics and in the affinity furification useful for treating and also useful in diagnostics and in the affinity from allergies. (1V) is also useful in diagnostics and or suffering from allergies. (1V) is also useful in diagnostics and or suffering from allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Saps
                                                                  Peptides useful for treating, preventing and ameliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin {\rm E}^{-}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human: Linkage technology, conjugated compound, carrier vehicle, epitope, Cepsilon?, Cepsilon3; Cepsilon4; imminoglobulin E; IgE mediated disease, antibody response.

                                                                                                                                                                                            90
                                                                                                        The present invention relates to linkage mothodology for use in the conjugation of compounds (e.g. petitides) to carrier ventures.

(c.g. macroscientes, polyers, dendrivers, proteins) to produce the colocical and immunological constructs. The invention provides a method for linking an epitope (e.g. a poptible) to a carrier wigh protein) for use in a phatacentriers. The invention describes peptides derived from or minutolical the oppounds or cepsiton? Cepsiton3 or Cepsilon4 regions of human immunolicition E figh whitem are used to produce completed compounds. The invention of the invention of the invention of a peptide epitope, and the invention allows for controlled compounds or controlled compagation of a peptide epitope, antiquel to a protein so as to form an immunogenic configure which may be able to protein so as to form an immunogenic configure which may be able to the asset in the invention may be able to be a protective antibody response in an animal or burnar patient.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disciplide bridge cyclised peptide and an immunogenic catrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from immunoglobulin E (IGE) suitable to be cyclised and used in the invention.
   allergy.

AAU16648
The invention relates to a method of producing cylutaxic T symphocytes (CTS) apecific for one or more non-tumous self anisper (chilephtopes).

The method involves loading anishen presenting cells (AFS) having class of adjoint stocompatibility complex molecules with the T cell epitopes.

The major histocompatibility complex molecules with the T cell epitopes.

The cells specific for the T cell epitopes. The invention is useful for treating autoincome disease including theoratoid arthinis, production in ephticis, multiple sclenosis, autoinmoune thyroiditis, itsulin dependent disease including theoratoid autoimmune thyroiditis, itsulin dependent disease and transplant rejection and/or altergic asthma and venom altergy. The invention is also useful in cell therapy. The present sequence is beam incumocation in E 1965 High AE peptide centif. This peptide is useful in the invention.

The present invention describes a poptide (I) comprising an isolated surface exposed group/epitope (EI) of C-epsilon-2 domain (D) of immunogiobiline (1986, or its mimotope. Also described are: (I) an immunogiobiline (1986, or its mimotope. Also described are: (I) an immunogiobiline (II) to treating allergy comprising (I); (2) a vaccire (III) for treating allergy comprising (I); (2) a vaccire (III) for treating allergies composition (PC) comprising (IV); (5) a peptide (Ia) capable of bing recognised by (IV); (6) an immunogen (II) and (II) and (III) and (IIII) and (III) and (III) and (III) and (III) and (III) and (III) a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ö,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Conjugation of compounds (e.g. p-prides) to attiet weblicts

(e.g. macro-sledules, polymers, dendithers, professor to produce
biological and immological constructs. The invention provides a
picture of the series apprides denditor professor to a catter (e.g. a
protein) for use in a pharmaceutical composition or a vaccine. The
invention describes peptides derived from or minotopies of the
Copysitor, Copysion of Cepsion 4 regions of human immunojabilin E
(igE) Which are used to produce conjugated compounds. The compounds or
compositions of the invention are useful in the manifacture of a
methodment for the treatment of ign mediated diseases. The invention
allows for controlled conjugation of a peptide epitope (artisque) to a
protein so as to form an immunogenic conjugate which may be able to
take a procentive antibody response in an inman or human patient.

Che Crestonic Porsilon3/Cepsilon4 regions of numan inclines of

```
where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin 5 (1981) saltable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to conjugates suitable for use in vaccines

The present invention relates to compositions comprising a substance that modulates the status of 1259508 or a molecule that is modulated by 1259508. The status of a cell that expresses 1259508 is modulated. The composition is useful for treating cancer, particularly prostate, bladder, kidney, colon, ovary or breast cancer. The 1259508 protein and/or a molecularle sequence encoding the protein is useful for a molecularly against cancer. The present sequence is a 1259508 epitope shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising a substance that modulates the status of 125P5C8 gene or a molecule that is modulated by 125P5C8, useful for treating or preventing cancer that expresses or over expresses 125P5C8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, 125PSCB, cancer, oytostatic, breast cancer, prostate cancer, bladder cancer, kidney cancer, colon cancer, ovarian cancer, epitope

                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                     The invention relates to a method of producing cytotoxic T lymphocytes (CTEs) specific for one or more non-timent self antigen T cell epitopes. The major histocorpatibility complex misecules with the T cell epitopes. I major histocorpatibility complex mish the T cell epitopes. T cells specific for the T cells with the APCS to activite precision CDB. T cells specific for the T cell spitches. The invention is useful for treating autoimmune nephritis multiple sclerosis, autoimmune nephritis multiple sclerosis, autoimmune hypothitis multiple sclerosis, inflammanche thyroidiis, insulatin dependent diabetes, Coomis disease, inflammanchy bawel disease, or set to exceed as food altergy, hay fever, altergic rhinitis, altergic standard and worm altergy, hay fever, altergic rhinitis, altergic set sections and considered in the invention. This peptide is used in the exemptification of the invention.

The luciferase protein is composed of 19 and 35 kbs proteins and is useful as a reporter enzyme. Antibodies against luciferase and oligonicleotides derived from luciferase polynucleotides are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel secretional luciferase derived time the newpower luminoscent shrimp Oplophorus gracilirostris consists of 1980a and 35 kDa subunits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Saps
Producing cytotoxic T lymphocytes for treating e.g. autoimmune diseases, comprises culturing CD8- T cells with antigen presenting cells to activate precursor CD8- T cells specific for T the cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lucriferase, deep sea luminous shiimp, decapoda, repurter enzyme,
35 kDa subunit, photoprofein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Opiophorus gradilirostris luciferase 35 kDa subunit popride

The invention relates to a mathod of producing cytoroxic I lymphocytes (CTES) specific for one or more non-through antigen T cell epitopes. The method involves loading antigen presenting cells (APPS) caving class i major histocompatibility complex notecules with the Tell epitopes, and culturing the CDE+ T cells will the APCS to activate produces CDE+ T cells specific for the T cell upitopes. The invention is useful for treating autoimmune disease including intermatoral arthritis, pacifies, intermine applicits, multiple scherosis, additional typicalitis, multiple scherosis, additional disease, grafit versus host disease and transplant rejection office alleges.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease such as food allergy, hay lever, allergic hornitis, allergic astana and venom allergy. The invention is this hard in early therapy. The present sequence is human interpretable in E 1 Jg. Him A2 provide motif. This peptide is used in the exemplification of the invention.
                                                                                                                                                       Optoloxio I lymphocyte: CTD, tumour, antigen presenting cell, allergy, lupus; autoimmune disease, rhoumatoid atthittis, autoimmune impuritis, psorinais, APC, multiple sclerosis, artoimmune inyrinaitis; hay fever; inflammatory bowel disease, insulin dependent distance of therefore included to the formal chan's disease, allergic filmittis; gidfi versus fost disease, asthmaticansplant rejection; human; immunoglobulin E; 198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producting cytotoxic 7 lymphocytes for treating e.g. Autoimmune diseases, comprises culturing CDB. Thelis with antigen presenting cells to activate precursor CDB. Theils specific for Title cell epicopes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      55.3%; Score 26; UB 14; Length 9; 100.0%; Pred, No. 9.34+05; ive 0; Nismatches 0, indels

subject. The method comprises analysing a sample of brain tissue from a subject by 2D electrophoresis to generate a 2D array of Alzhenmer's disease (AD) in a subject by 2D electrophoresis to generate a 2D array of Alzhenmer's disease associated features (ADFs), whose relative abundance correlates with the piesence, absence, stage or severity of AD and comparing the abundance of each feature with the abundance of that chosen feature in brain tissue from persons free from AD. The invention also describes Alzhenmer's disease associated protein isoforms (APPIS) defectable, in brain tissue. The methods and compositions of the invention are useful for the screening developing AD. Or prognosis of AD in a subject, for determining the stage or severity of AD in a subject, for determining the effect of a subject thaving AD. Antibodies capable of binding to ADPIs are useful for treating or preventing AD, and for determining the efficacy of a given treating or preventing AD, and for determining the efficacy of a given treating or preventing AD, and for determining the efficacy of ADPI is treating in the impair ADPI in a subject. ABG68038 represent human ADPI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytotoxic T lymphocyte, (TL) tumour, antigen presenting cell, allergy,

Degraw J,

The invention relates to a method of producing cyfolodic; typinocytes of the specific for one or more non-invent self-antigen 1-41 epitopes.

The rectod involves loading antigen presenting cells. APPS Laving class: major historompatibility complex molecules with the Teelis appropriate of the CDB.

The specific for the Though with the APPS to antivate preduces CDB.

The specific for the Though with the APPS to antivate preduces CDB.

The specific for the Though with the APPS to antivate preduces CDB.

The specific for the Though with the inventor is useful for treating autonomous disperse include sold of the treating autonomous disperse.

The specific for the Though with the complex inflamentary the sase.

The specific for the The Theorem and the sale of the specific state of the sp

patent No. 6417338
| Patent No. 6417338
| GENERAL INCARATION WARY
| APPLICANT: STRACKE, WARY
| APPLICANT: STRACKE, WARY
| APPLICANT: STRACKE, WARY
| APPLICANT: STRACKE, MANCE
| APPLICANT: STRACKE, MANCE
| APPLICANT: STRACKE, MENNY
| APPLICANT: KRITZE, HENRY
| APPLICANT: KRITZE, HENRY
| APPLICANT: WARATA, HENRY
| APPLICANT: WARATA, HENRY
| TITLE OF INVENTION: CANCER DIAGNOSIS AND THERAPY
| TITLE OF INVENTION WARBER: US/09/483, 83.1B
| CURRENT FILING DATE: 1992-01-17
| PRIOR FILING DATE: 1994-05-25
| PRIOR FILING DATE: 1994-05-25
| PRIOR APPLICATION WABER: 08/346,455
| PRIOR FILING DATE: 1994-05-25
| PRIOR PILING DATE: 1997-11-24
| WABER OF SED ID NCS: 70
| SEQ ID NO 47
